Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for stading various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEX293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for stading various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEX293 cells are transfected with the plasmid pCBP4/Sec-30664188. This sequence corresponds to a protein used in the invention.

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 actising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCBP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody; binding fragment; platelet derived growth factor-DD; PDGF-DD; nephritis; mesangial cell proliferation inhibition; mesangial proliferative glomerulonephritis; nephrotropic; antiinflammatory; dermatological; immunosuppressive; antidiabetic; gene therapy; human; monoclonal antibody; mAb.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.

The present invention describes an antibody or its binding fragment that binds platelet derived growth factor-DD (PDGF-DD), where the antibody is useful in preparing a medicament for treating nephritis. Also described: (1) a method of detecting nephritis; (2) a method of treating nephritis; (3) a method of inhibiting mesangial cell proliferation, and (4) a method of treating mesangial cell proliferation, and (4) a method of treating mesangial proliferative glomerulonephritis. The antibody has nephrotropic, antiinflammatory, dermatological, immunosuppressive and antidiabetic activities, and can be used in gene therapy. The antibody or its binding fragment, that binds PDGF-DD, can be used in preparing a medicament for treating nephritis and related disorders, e.g., mesangial proliferative glomerulonephritis. The present sequence represents a human monoclonal antibody (mAA) variable region sequence, which is used in the exemplification of the present invention.
                                                   Use of an antibody or its binding fragment that binds platelet derived growth factor-DD (PDGF-DD) for preparing a medicament for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB 8; Length 107;

WPI; 2004-348433/32. N-PSDB; ADS84413 New antibodies that bind to or activate an endogenous human

The present invention describes an antibody of the interpretaction of a cativates an endogenous activity of a human erythropotetin (EPD)

receptor in a mammal, but does not interact with a peptide having a sequence of 30 amino acids (SEQ ID NO:1, ADS&4362). Also described: (1) methods of medulating or activating an endogenous activity of a human EPO receptor in a mammal, comprising administering to the mammal a computed for the above antibody or its fragment to modulate or activate the receptor; (2) a method of treating a mammal suffering from aplasia, comprising administering to the mammal a therapeutic amount of the above antibody or its fragment to modulate or activate the receptor; (3) a pharmaceutical composition comprising a therapeutic amount of the above antibody or antibody fragment, and a pharmaceutical excipient; (4) an isolated and purified polynuclectide sequence, and their fragments, complements and degenerate codon equivalents; and (5) an isolated and composition and their fragments. The EPO receptor binding antibody has antianaemic, neuroprotective and vulnerary activities, and can be used in gene therapy. The compositions and methods from the present invention can be used for modulating an endogenous activity of a human EPO receptor or for treating mammals suffering from aplasia or anaemia. They may also be used for identifying mammals having a dystunctional EPO receptor. The composition may also be used in the present sequence resulting against neural cell and/or tissue damage resulting from brain/spinal cord injury, stroke and the chain variable region, which is given in the exemplification of the The present invention describes an antibody or its fragment that binds to erythropoietin receptor, useful for diagnosing, preventing or treating disorders associated with dysfunctional erythropoietin receptor, e.g. Claim 10; SEQ ID NO 53; 192pp; English. present invention. anemia.

                                                                                                                                                                                                                                                                                   The invention describes an antibody or its fragment that activates an endogenous activity or capable of binding to a human erythropoietin creceptor in a mammal, or that comprises at least one heavy or light chain creceptor in a mammal, or that comprises at least one heavy or light chain variable region having a sequence comprising 116 or 107 amino acids (SEQ ID NO: 3 or 5) given in the specification on its fragment, but does not interact with a peptide comprising 30 amino acids (SEQ ID NO: 1) also given in the specification. Also described are: a method of activating or modulating an endogenous activity of a human erythropoietin receptor in a mammal; a pharmaccutical composition comprising a therapeutic amount of mammal; a pharmaccutical composition comprising a 22-370 bp (even SEQ ID NO: 2-56) given in isolated and purified polynucleotide sequence selected from 28 sequences comprising 322-370 bp (even SEQ ID NO: 9-56) given in the specification, and their fragments, complements, and degenerate codon cquivalents; and an isolated and purified amino acids sequence selected from 39 sequences comprising 27-552 amino acids (ad SEQ ID NO: 3-57, and SEQ ID NO: 58-68) given in the specification or their fragments. The antibody or its antibody or its antibody or its antibody or its antibody or complements are also useful for treating disorders characterised by decreased or subnormal levels of corygen in the blood or tissue such as hypoxaemia or chronic tissue corygen in the blood or tissue such as hypoxaemia or chronic tissue changed protecting against neural cell and/or tissue damage, resulting from the protecting against neural cell and/or tissue damage, resulting from coryceting against neural cell and/or tissue damage, resulting from coryceting application and the like. The antibodies are also useful for identifying or diagnosing mammals having dysfunctional cord injury, stroke and the like The antibodies are also cuseful for identifying or diagnosing mammals are also used a manine cortic transitional cord injury. Human anti-BPO-R antibody Ab467 light chain SEQ ID NO:109.

(first entry)

18-NOV-2004 ADS84470;

```
The present invention describes an antibody or its fragment that binds to or activates an endogenous activity of a human erythropoietin (BPO)

CC receptor in a mammal, but does not interact with a peptide having a sequence of 30 amino acids (BEQ ID NO:1, ADS04362). Also described: (1) methods of modulating or activating an endogenous activity of a human EPO cc receptor in a mammal, comprising administering to the mammal a therapeutic amount of the above antibody or its fragment to modulate or activate the receptor; (2) a method of treating a mammal suffering from a plasia, comprising administering to the mammal a therapeutic amount of the above antibody or its fragment to modulate or activate the receptor; (3) a pharmaceutical composition comprising a therapeutic amount of the above antibody or its fragment, and a pharmaceutical excipient; (4) an isolated and purified polynucleotide sequence, and their fragments or isolated and degenerate codon equivalents; and (5) an isolated and burified polynucleotide sequence, and their fragments. The EPO receptor complements and degenerate codon equivalents; and (5) an isolated and con be used in gene therapy. The compositions and methods activities, and can be used for modulating an endogenous activities, and can be used for modulating an endogenous activity of a human EPO receptor or for treating mammals suffering from applasia or anaemia. They may also be used for identifying mammals having a dysfunctional and properting and properting mammals or anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

```
New antibody or its antibody fragment that activates an endogenous activity or is capable of binding to a human erythropoietin receptor in a mammal, useful for treating a mammal suffering aplasia or anemia.
                                                                                            antianaemic; respiratory; vulnerary; gene therapy; vaccine; erythropoietin receptor; EPO-R; anti-EPO-R-antibody; aplasia; anaemia; hypoxaemia; chronic tissue hypoxia; blood circulation; blood flow; wound healing; neural cell damage; tissue damage; brain injury; spinal cord injury; stroke; human; anti-EPO-R-antibody; light chain;
                                                                                                                                                                                                                                                                                                                          Reilly EB, Green LL, Wieler J;
                                                                           Human antibody Ab467 light chain polypeptide segid 109.
                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 109; 156pp; English.
                  ADR68612 standard; protein; 234 AA.

The invention describes an antibody or its fragment that activates an endogenous activity or capable of binding to a human erythropoietin receptor in a mammal, or that comprises at least one heavy or light chain variable region having a sequence comprising 116 or 107 amino acids (SEQ ID NO: 3 or 5) given in the specification or its fragment, but does not interact with a peptification and or its fragment, but does not interact with a peptification. Also described are: a method of activating or modulating an endogenous activity of a human erythropoietin receptor in a manibody or antibody fragment above and a pharmaccutical excipient; an isolated and purified polynucleotide sequence selected from 28 sequences comprising 322-370 bp (even SEQ ID NOs between SEQ ID NO: 2-56) given in the specification, and their fragments, complements, and degenerate codon equivalents; and an isolated and purified amino acids (ad SEQ ID NOs between SEQ ID NO: 3-57, and SEQ ID NO: 58-68) given in the specification or medulates the activity of the receptor is useful in a method of treating a mammal suffering aplasia or anamia. The antibodies are also useful for treating disorders characterised by decreased or subnormal levels of oxygen in the blood or tissue such as hypoxaemia or chronic tissue hypoxia and/or diseases characterised by inadequate blood circulation or reduced blood flow. They are also useful for promoting wound healing or for protecting against neural cell and/or tissue damage, resulting from brain/spinal cord injury, stroke and the like. The antibodies are also esful for identifying or diagnosing mammals having dysfunctional erychropoietin receptor. This sequence represents a human Ab467 antibody light chain polypeptide.

```
The present invention describes an antibody or its fragment that binds to or activates an endogenous activity of a human erythropoietin (BPO)

Creceptor in a mammal, but does not interact with a peptide having a sequence of 30 amino acids (SEQ ID NO:1, ADS84362). Also described: (1) methods of modulating or activating an endogenous activity of a human BPO receptor in a mammal, comprising administering to the mammal a creativate the receptor; (2) a method of treating a mammal suffering from aplasia, comprising administering to the mammal a therapeutic amount of the above antibody or its fragment to modulate or activate the receptor; (3) a pharmaceutical composition comprising a therapeutic amount of the above antibody or antibody fragment, and a pharmaceutical excipient; (4) an isolated and purified polymucleotide sequence, and their fragments, complements and degenerate codon equivalents; and (5) an isolated and purified amino acid sequence, and their fragments. The BPO receptor binding antibody has antianaemic, neuroprotective and vulnerary

ö
activities, and can be used in gene therapy. The compositions and methods from the present invention can be used for modulating an endogenous activity of a human BPO receptor or for treating mammals suffering from aplasia or anaemia. They may also be used for identifying mammals having promoting wound healing or in protecting against neural cell and/or tissue damage resulting from brain/spinal cord injury, stroke and the like. The present sequence represents a human anti-BPO-R antibody light chain variable region, which is given in the exemplification of the

                                                                                                                                                                                                                                                                                                                         g
```

New antibody or its antibody fragment that activates an endogenous activity or is capable of binding to a human erythropoietin receptor in a mammal, useful for treating a mammal suffering aplasia or anemia.

N-PSDB; ADR68543

Claim 10; SEQ ID NO 41; 156pp; English.

The invention describes an antibody or its fragment that activates an endogenous activity or capable of binding to a human erythropoietin receptor in a mammal, or that comprises at least one heavy or light chain

```
modulating an endogenous activity of a human erythropoietin receptor in a modulating an endogenous activity of a human erythropoietin receptor in a mathbody or antibody fragment above and a pharmaceutical excipient; an isolated and purified polynucleotide sequence selected from 28 sequences comprising 322-370 bp (even SEQ ID NOS between SEQ ID NOS 2-56) given in the specification, and their fragments, complements, and degenerate codon equivalents; and an isolated and purified amino acids sequence selected from 39 sequences comprising 27-55 amino acids (add SEQ ID NOS 3-57, and SEQ ID NOS 58-68) given in the specification or cheir fragments. The antibody or its antibody fragment that activates or modulates the activity of the receptor is useful in a method of treating a mammal suffering aplasia or anaemia. The antibodies are also useful for covygen in the blood or tissue such as hypoxaemia or chronic tissue or reduced blood flow. They are also useful for promoting wound healing or for protecting against neural cell and/or tissue damage, resulting from brain/spinal cord injury, stroke and the like. The antibodies are also useful for identifying or diagnosing mammals having dysfunctional cut in receptor. This is the amino acid sequence of an anti-BDO-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

The present invention describes an antibody or its fragment that binds to or activates an endogenous activity of a human erythropoietin (BPO) receptor in a mammal, but does not interact with a peptide having a creceptor in a mammal, but does not interact with a peptide having a creceptor in a mammal. MOS:, ADS84362). Also described: (1) methods of modulating or activating an endogenous activity of a human BPO creceptor in a mammal. comprising administering to the mammal a creceptor; (2) a method of treating a mammal suffering from activate the receptor; (2) a method of treating a mammal suffering from cativate the receptor; (2) a method of treating a mammal suffering from companiesting administering to the mammal a therapeutic amount of the above antibody or its fragment, and a pharmaceutical excipient; (4) an isolated and purified polynucleotide sequence, and their fragments, complements and degenerate codon equivalents; and (5) an isolated and purified polynucleotide sequence, and their fragments. Complements and degenerate codon equivalents; and (5) an isolated and con be used in gene therapy. The compositions and methods activities, and can be used in gene therapy. The compositions and methods activities, and can be used for modulating an endogenous cativities, and a busy and so be used for identifying mammals having activity of a human BPO receptor or for treating mammals suffering from aplasia or anaemia. They may also be used for identifying mammals having a receptor in properting and any and any and any any also be used in any and also be used in any any and any and any and any any and any and any and any and any any and any any and any any and any a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           promoting wound healing or in protecting against neural cell and/or tissue damage resulting from brain/spinal cord injury, etroke and the like. The present sequence represents a human anti-EPO-R antibody light chain, which is given in the exemplification of the present invention.
                                                                                                            New antibodies that bind to or activate an endogenous human erythropoietin receptor, useful for diagnosing, preventing or treating disorders associated with dysfunctional erythropoietin receptor, e.g.
                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 91; 192pp; English.

The invention describes an antibody or its fragment that activates an endogenous activity or capable of binding to a human erythropoietin candogenous activity or that comprises at least one heavy or light chain variable region having a sequence comprising 116 or 107 amino acids (SEQ CO 1D NO: 3 or 5) given in the specification or its fragment, but does not given in the specification. Also described are: a method of activating or manmal; a pharmaceutical composition comprising a therapeutic amount of an antibody or antibody fragment above and a pharmaceutical excipient; an antibody or antibody fragment above and a pharmaceutical excipient; an antibody or antibody fragment above and a pharmaceutical excipient; an antibody or antibody fragment showe and a pharmaceutical excipient; or isolated and purified sequence selected from 28 sequences comprising 32-370 bp (even SEQ ID NO 80-25-56) given in the specification, and their fragments, complements, and degenerate codon comprising 27-552 amino acids (odd SEQ ID NOS between SEQ ID NOS 3-57, and SEQ ID NOS 5-52 amino acids (odd SEQ ID NOS between SEQ ID NOS 5-52 amino acids (odd SEQ ID NOS between SEQ ID NOS 3-57, and SEQ ID NOS 5-68 given in the specification or their fragments the activity of the receptor is useful in a method of treating alsorders characterised by decreased or subnormal levels of creating disorders characterised by decreased or subnormal levels of oxygen in the bload or tissue such as hypoxaemia or chronic tissue cyproced in and/or diseases characterised by inadequate bload circulation or reduced bload flow. They are also useful for promoting wound healing or brain/spinal cord injury, stroke and the like. The antibodies are also useful for identifying or diagnosing mammals having dysfunctional cypromotion and injury, stroke and the like. The antibodies are also the promoting and and promoting mammals baying dysfunctional cypromoting mammals and and promoting mammals and an antibod flow. They are also useful for promoting dysfunctional cypromoting a

platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 306641880.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEF4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                          Weber R;
                                                                                                                                                                                                                                                                                                                                                                                           New human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D), useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a human monoclonal antibody that binds to
                                                   antiinflammatory; immunomodulator; cytostatic; gene therapy.
                                                                                                                                                                                                                                                                                                          Gazit G,
                Anti-human PDGF-D antibody protein related sequence #67.
                                                                                                                                                                                                                                                                                                        Chen F,

                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                      558

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                      US-10-665-383-24
